Customization

- Create custom search categories with available engines
- Select active search engines for each category
- Availability of result layouts (compact, standard and detailed)

Miscellaneous

- Automated software and search engine updates
- Extensive contextual help
- No advertising banners

Features

Searching the web differently

Using more than 1,000 search engines grouped into 120 categories

Target Your Web searches

Don't just rely on only one search engine. With Copernic Agent Personal, experience the benefits of parallel searching with more than 1000 search engines in 120 specialized categories, some based on language or country. Furthermore, you can even add new search categories as they become available.

Copernic Agent Personal allows you to cover more of the Web and get all available and relevant results. From a single query, Copernic Agent Personal consults multiple search engines at once, combines their results, removes duplicates and keeps only the very best of the information gathered from queried search engines.

Manage Your Searches and Results

Being able to simply click on results, as you do using conventional Web search engines, is not enough. Copernic Agent Personal provides you with advanced search management tools and an easy-to-use environment in which you can filter, group and sort search results by numerous criteria (e.g. domain and status); remove broken links; save pages; search within results using keywords or Boolean queries; share and export results in file formats such as XML

Automate Broken Links Removal

With a single click, you can ask Copernic Agent Personal to remove broken links automatically at the end of your search. This ensure you that each result you get is actually available on the Web and will avoid "page not found" error messages.

Create Custom Search Categories

Copernic Agent Personal lets you create your own customized search categories using available engines. You can mix categories and engines to create your perfectly targeted search category. You can also create a list of your favorite categories for quick access to them. CSV and HTML; keep and annotate your searches and results; and much more.

Access Hidden Information

A huge part of the Web, called the "Invisible Web", is hidden to generic search engines. Scientific studies indicate that it is 10 times bigger than the visible Web. Copernic Agent Personal provides specialized search categories that delve more deeply into the Web. Imagine what you are missing!

Voted best software in its category

Tips & Tricks

1. Use the integrated Wizard to quickly launch your web Search

The integrated wizard will streamline the launch of your queries, your favorite and last used categories are available at a simple click away. Type in your keyword and select your category to launch your search.

2. Select the category to pinpoint your search

More than 1000 search engines grouped into 120 categories, greatly improving the quality of results. You can add new available categories directly from Copernic Agent.

3. Organize categories the way you want them

Add the categories you use most often to the Favorites group to have them readily available. Also, create custom categories based on the vast selection of available search engines.

4. Save pages for offline viewing

Download all results to your computer, to be able to view them later, even if your computer is not connected to the internet.

Testimonials

“ The Internet contains just about any information you need, but how do you find it? Copernic Agent, a Web-searching tool, allows for better Web coverage by searching multiple search engines simultaneously and intelligently indexing the results. We found that, even with some disabled features, the Basic version begins where Web-based search engines end. Most importantly, Copernic doesn't leave you with thousands of search results, but provides handy options, such as filtering, summarizing, dead-link removal, grouping, and numerical value scoring, to assist in finding more relevant results. Although Copernic stumbled over some search queries, this tool definitely has some handy features that are perfect for quick and general searches. Overall, it's hard to beat a few carefully chosen keywords on search engines such as Google, but we were impressed with Copernic's search capabilities. After a week of extensive use, we became more comfortable and accustomed to its extensive interface and feature set. ”

- CNET editors' review

“ Copernic Agent is an exceptionally useful tool for web searchers. It allows to selectively search multiple sources with its powerful sorting and analysis tools. Not many people think beyond Google or Yahoo! to do simple searches, and those who do, often find that great alternatives are available. Copernic Agent is one of those few software that can be customized to appeal both to hardcore users and inexperienced researchers and doesn't lose any effectiveness in the process. With its different search categories polling several search engines, it provides deeper search capabilities. ”
